

# Collain Enterprise Content Management and Document Workflow

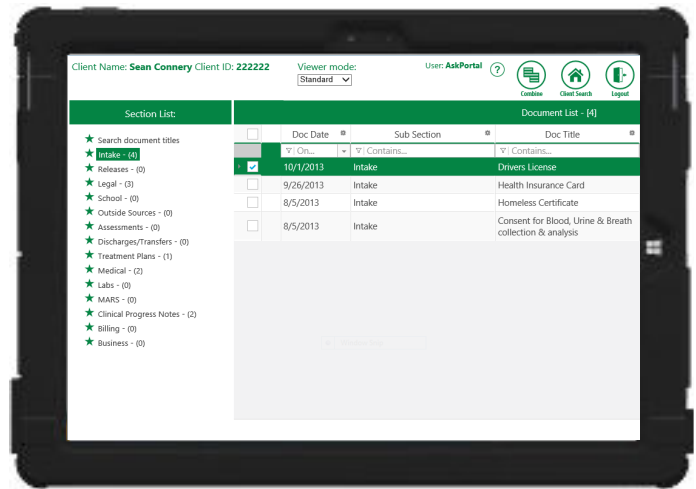

Choose Smart Solutions from Collain

## Direct client scanning, indexing and web-based retrieval allows staff to access electronic chart images without ever leaving the EHR.

Collain Enterprise Content Management and Document Workflow provides LTPAC organizations like yours with a proven solution for secure and easy access to clients' paper charts.

Our solution seamlessly integrates document management with your Collain EHR system to provide capture, archive and retrieval capabilities for all your mission-critical health care records.

Converting hardcopy files and integrating with the EHR enables your organization to provide a single view of charts to all authorized staff—at the same time—and at last stem the never ending flow of paper.

## Collain Enterprise Document Management

- Integrate document scanning and indexing with your EHR for a single point of view into clients' complete charts
- Scan paper and electronic documents, driver's licenses, insurance cards, etc. into a full-text searchable image archive
- Access electronic client charts 24x7 for information sharing among the care team and improved quality of care
- Sort through client electronic charts and view, search, redact, combine, print and e-mail individual documents
- Redact confidential information prohibited from disclosure to safeguard electronic Protected Health Information (ePHI)
- Increase productivity of your staff while decreasing the associated risk of moving paper between clinical professionals
- Increase audit efficiency and accountability with reporting on all document activities and access
- Keep document images and data encrypted and stored on a secure server where the originals are unalterable
- Ensure business continuity with the integrated document archive to provide access to client charts in the event of a disaster
